

# CURRICULUM

for

DIPLOMA PROGRAMME

in

**ELECTRICAL ENGINEERING**

2nd Year (3rd & 4th Semester)

FOR THE STATE OF HIMACHAL PRADESH

Prepared by

**National Institute of Technical Teachers Training & Research  
Sector-26, Chandigarh-160019**

June, 2018

**STUDY AND EVALUATION SCHEME**  
**THIRD SEMESTER ELECTRICAL ENGINEERING**

SN	Subjects	Hrs/Week		Marks in Evaluation Scheme								Total Marks

\*\*Common with Diploma in ECE, EEE

**Industrial Training** - After examination of 4<sup>th</sup> Semester, the students shall go for training in a relevant industry/field organisation for a minimum period of 6 weeks and shall prepare a diary. The students shall also prepare a report at the end of training and shall present it in a seminar, which will be evaluated during 5<sup>th</sup> semester.

**3<sup>RD</sup> & 4<sup>TH</sup> SEMESTER**  
**ELECTRICAL ENGINEERING**

### 3.1 FUNDAMENTALS OF ELECTRICAL ENGINEERING

L T P  
5 - 2

#### RATIONALE

*For a diploma holder in electrical engineering, it becomes essential to know the fundamentals of the subject in order to grasp the knowledge of the field. This subject will provide acquaintance with various terms, knowledge of fundamental concepts of electricity, magnetism and various principles related to it.*

#### DETAILED CONTENTS

- 1. Basic Electrical Concepts** (4 Hrs.)  
Basic Electrical Terminologies: Potential Difference (Voltage), Charge, Current, Resistance, Power & Energy-Their definition, units and their interrelation with each other.
- 2. DC Circuits** (14 Hrs)
  - Ohm's law, Resistances in Series and Parallel, Voltage & Current Divider Rules
  - Effect of temperature on resistance, temperature coefficient of resistance, Resistivity.
  - Kirchhoff's Laws and their applications in solving Electrical Network Problems.
  - Network Theorems: Thevenin's theorem, Norton's theorem, Superposition theorem, Maximum Power Transfer theorem
- 3. Electrostatics** (08 Hrs)
  - Concept of Capacitance, Capacitor, Dielectric, Factors affecting Capacitance of a Capacitor.
  - Capacitance of Parallel Plates Capacitor & Cylindrical Capacitor.
  - Grouping of Capacitors, Charging and Discharging of Capacitor, Time Constant, Energy Stored in a capacitor.
- 4. Batteries** (06 Hrs)
  - Working Principle, Construction and Applications of Lead acid, Nickel-Cadmium, Silver Oxide, and Li-ion Batteries
  - Charging methods used for Lead acid battery.
  - Care and maintenance of a Lead acid battery, testing of battery
  - Grouping of cells in series and parallel (simple numerical problems).

## 5. Electromagnetism

(10 Hrs)

- Introduction to Electromagnetism: Magnetic effect of electrical current MMF, Magnetic Flux, Reluctance, Permeability, Magnetic flux density (B), Magnetic field intensity (H), Analogy between Electric and Magnetic circuits.
- Cross and Dot Convention, Right Hand thumb rule and Cork screw rule, Nature of magnetic field around straight current carrying conductor, Concepts of Solenoid and Torroid.
- Force on a Conductor placed in the Magnetic field, Force between two Parallel current carrying conductors.
- Series & Parallel Magnetic circuits, Numerical problems on magnetic circuits.
- Concept of Hysteresis loop (B-H Curve) and Hysteresis loss.

## 6. Electromagnetic Induction

(08 Hrs)

- Faraday's Laws of electromagnetic induction.
- Lenz's law.
- Fleming's Right and Left Hand Rule.
- Principle of self and mutual induction.
- Principle of Self and mutually induced e.m.f. and simple problems
- Inductances in Series and Parallel.
- Energy stored in a magnetic field.
- Concept of Eddy current, Eddy current losses.

## 7. A.C. Circuits

(20 Hrs)

- Concept of alternating current/EMF generation, Equation of instantaneous values of alternating current and voltage.
- AC terms: Cycle, Amplitude, Time period, Frequency, Instantaneous values, RMS value, Average value, Form factor, Peak factor. Numerical
- Representation of alternating sinusoidal quantities by vectors.
- Phasor algebra (addition, subtraction of complex quantities).
- AC through pure resistance, inductance and capacitance.
- Alternating voltage applied to RL, RC and RLC Series circuit (impedance triangle, phasor diagram and their solutions).
- Power in pure resistance (R), inductance (L), capacitance (C), R-L, R-C, and RLC circuits.
- Concept of Susceptance, Conductance and Admittance.
- Active and reactive components of current and their significance.
- Power factor and its practical significance,
- Resonance in series and parallel circuits, Quality factor, Numerical.

## **LIST OF PRACTICALS**

1. Determination of voltage-current relationship in a DC circuit under specific physical conditions and to draw conclusions (verify ohm's law)
2. (a) To Calculate the values of total resistance of two or more resistances connected in series.  
(b) To Calculate the values of total resistance of two or more resistances connected in Parallel
3. Verification of Kirchhoff's Current law applied to DC circuits:
  - a) To construct a circuit arrangement consisting of resistances in series, parallel combination
  - b) Identification of node points in the circuit
  - c) To verify that algebraic sum of currents at node point is zero
4. Verification of Kirchhoff's Voltage law applied to DC circuits:
  - a) To construct a circuit arrangement consisting of resistances in series, parallel combination
  - b) To verify that algebraic sum of EMFs and voltage drops in a closed loop is zero
5. To find ratio of inductance of a coil having air /iron core respectively and to see the effect of introduction of a magnetic core on coil inductance
6. To construct an R-L and R-C circuit and to measure
  - a) Impedance
  - b) Phase angle between voltage and current (power factor)
  - c) And construct impedance triangle
7. To plot a graph between current and frequency of RLC series circuit for resonance conditions.
8. Measurement of power and power factor of a single phase RLC circuit. Also measure kVA and kVAr
9. Testing of lead acid battery using Hydrometer and Cell Tester

## RECOMMENDED BOOKS

1. Electrical Science by V.K. Mehta, S Chand and Co., New Delhi
2. Electrical and Electronic Technology by Hughes, Pearson Education
3. Basic Electrical Engineering, by Kothari & Nagrath, Mc Graw Hill Publication
4. Fundamentals of Electrical Engineering by Sahdev, Unique International Publication, Jalandhar.
5. Electrical Technology by JB Gupta, SK Kataria and Sons, New Delhi
6. Electrical Science by S. Chandhni, R Chakrabarti and P K Chattopadhyay. Narosa Publishing House Pvt. Ltd., New Delhi
7. Basic Electrical Engineering by PS Dhogal, Tata McGraw Hill, New Delhi
8. Principles of Electrical Engineering by BR Gupta, S Chand & Co., New Delhi.
9. ABC of Electrical Engineering, Jain and Jain, Dhanpat Rai Pub.

<b>SUGGESTED DISTRIBUTION OF MARKS</b>			
<b>Sr. No.</b>	<b>Topic</b>	<b>Time Allotted</b>	<b>Marks Allocation (%)</b>
1	Basic Electrical Concepts	04	06
2	DC Circuits	14	20
3	Electrostatics	08	12
4	Batteries	06	08
5	Electromagnetism	10	14
6	Electromagnetic Induction	08	12
7	AC Circuits	20	28
<b>Total</b>		<b>70</b>	<b>100</b>

## 3.2 ELECTRICAL MACHINES - I

**L T P**  
**4 - 2**

### **RATIONALE**

*Electrical Machines is a subject where a student will deal with various types of electrical machines which are employed in industries, power stations, domestic and commercial appliances etc. After studying this subject, an electrical diploma holder must be competent to repair and maintain these machines and give suggestions to improve their performance. Practical aspects of the subject will make the students capable of performing various tests on the machines as per latest BIS specifications. This part of the electrical machine covers polyphase circuits and transformers.*

### **DETAILED CONTENTS**

#### **1. Polyphase Circuits**

(10 hrs)

- 1.1 Advantage of 3-phase system over 1-phase system
- 1.2 Star-Delta Connection (phase current, line current, phase voltage, line voltage, relationship between phase & line parameters, phasor diagram)
- 1.3 Star-Delta Transformation
- 1.4 Power in 3-Phase circuit
- 1.5 Power Measurement in 3-phase circuit
- 1.6 Two Wattmeters method for measurement of Power and Power factor.

#### **2. Single-Phase Transformer**

(24 hrs)

- 2.1 Constructional Features of Transformer: Shell type and core type transformer
- 2.2 Comparison between shell type and core type transformer
- 2.3 Working Principle of transformer
- 2.4 EMF equation of transformer, transformer ratio, rating of transformer (Numerical)
- 2.5 Concept of ideal transformer
- 2.6 Transformer phasor diagrams: Transformer phasor diagram on no-load and under loading conditions (Resistive, Inductive and capacitive load)
- 2.7 Equivalent circuit diagram of transformer referred to primary and secondary side.
- 2.8 Transformers Losses.
- 2.9 Tests on transformers: Polarity test, Open and short circuit test.

- 2.10 Transformer efficiency, all day efficiency, condition for maximum efficiency (derivation).
- 2.11 Voltage regulation of a transformer for resistive, inductive and capacitive load. (Numericals)
- 2.12 Parallel operation of single-phase transformer- Need and Necessary conditions.

### **3. Three-Phase Transformers**

(12 hrs)

- 3.1. Introduction and Construction of 3- phase transformer. Essential accessories of 3-phase Transformers: Conservator tank, breather, Buchholz's relay and their functions.
- 3.2 Advantage of a 3- phase unit transformer over 3-phase transformer using 3-units of single phase transformer.
- 3.3 Three-phase transformer configurations: delta-delta, delta-star, star-star, star-delta and their phase and line voltage and current relations (No derivation only study)
- 3.4 Conditions for Parallel operation of Transformers.
- 3.5 Difference between Power transformer and Distribution transformer
- 3.6 Polarity test of 3-phase transformer.
- 3.7 Cooling methods in 3-phase transformer.

### **4. Special purpose Transformers**

(10 hrs)

- 4.1 Autotransformer: Construction & working principle, Difference between autotransformer and two-winding transformer, Advantage and disadvantage of autotransformer, Applications of autotransformer.
- 4.2 Instruments transformers: Current transformer (CT), Potential Transformer (PT), Difference between CT & PT, Applications of CT & PT

### **LIST OF PRACTICAL**

- 1. Measurement of power and power factor by two wattmeter methods
- 2. To convert star connection of resistances into delta configuration and to find their equivalent value in delta mode and vice-versa.
- 3. To find turn ratio & polarity of 1-phase transformer.
- 4. To perform open circuit on 1-phase transformer for determination of iron losses.
- 5. To perform short circuit test on 1-phase transformer for determination of copper losses.
- 6. To find the efficiency and voltage regulation of 1-phase transformer by actually loading it.
- 7. Parallel operation of two single-phase/3- phase transformers & to study the load shared by each transformer.
- 8. Determination of dielectric strength of transformer oil.

## RECOMMENDED BOOKS

1. Electrical Machines by S.K. Bhattacharya, Tata McGraw Hill, New Delhi
2. Electrical Machines by S.K. Sahdev, Unique International Publications, Jalandhar
3. Electrical Machines by Nagrath and Kothari, Tata McGraw Hill, New Delhi
4. Electrical Machines by J.B. Gupta, SK Kataria and Sons, New Delhi
5. Electrical Machines by Dr. P. S Bhimbra, Khanna Publications, Delhi
6. Electrical Science by V.K. Mehta, S Chand and Co., New Delhi
7. Electrical and Electronic Technology by Hughes, Pearson Education
8. Basic Electrical Engineering, by Kothari & Nagrath, Mc Graw Hill Publication

<b>SUGGESTED DISTRIBUTION OF MARKS</b>			
<b>Sr. No.</b>	<b>Topic</b>	<b>Time Allotted</b>	<b>Marks Allocation (%)</b>
1	Polyphase Circuits	10	20
2	Single -Phase Transformer	24	40
3	Three-Phase Transformers	12	20
4	Special purpose Transformers	10	20
<b>Total</b>		<b>56</b>	<b>100</b>

### 3.3 ELECTRONIC DEVICES & CIRCUITS-I

L T P  
4 - 2

#### **RATIONALE**

*Having attained basic knowledge of Semiconductor Physics in Second semester, this course will enable the students to learn about the use of transistors in analog circuits like voltage amplifier, power amplifier, multistage amplifier, etc. It also gives information about FET, MOSFETs, and their applications for effective functioning in the field of electronic service industry.*

#### **1. Concept of Voltage and Current Source (3 Hrs)**

Concept of Voltage & Current Sources, Conditions for source to act as voltage source and current source, Graphical representation of voltage and current sources, difference between ideal and practical sources, Conversion of voltage source into current source and vice-versa.

#### **2. Review of Basic Electronics (7 hrs)**

P-N Junction, Semiconductor Diode Characteristics (Forward/reverse), Zener Diode, Zener diode characteristics, Zener Diode as Voltage Regulator.

#### **3. Transistor (16 hrs)**

Transistor: Constructional Features of Transistor (PNP & NPN Type), Working Principle of Transistor, Working of Transistor as an Amplifier, Concept of Transistor biasing and selection of operating point, Potential divider biasing Circuit. Need for stabilization of operating point.

Configurations of Transistor: Common Base (CB), Common Emitter (CE), Common Collector (CC), Input/Output Characteristics of Transistor in CB, CE & CC Modes

Transistor as an Amplifier in CE Configurations, Concept of DC load line and operating point. Performance characteristics of transistor amplifier i.e. input resistance, output resistance, effective collector load, current gain, voltage gain & power gain, Explanation of phase reversal of output voltage with respect to input voltage and its graphical demonstration, Concept of AC load line

Emitter Follower Circuit, Working of Transistor as a Switch

#### **4. Multistage Amplifiers (10 hrs)**

Need for multistage amplifier; Gain of multistage amplifier; Expression of gain of Amplifier in dB, Different types of multistage amplifier: RC coupled, Transformer

coupled, and Direct coupled amplifier, Frequency response and bandwidth of RC Coupled Amplifier.

**5. Large Signal Amplifiers** (08 hrs)

Difference between Voltage & Power Amplifier, Importance of Impedance matching in Amplifiers, Classification of Amplifiers: Class A, Class B, Class C, Class AB, Push Pull Amplifier-Circuit Description & Working, Complementary Push-Pull Amplifier Circuit

**6. Feedback in Amplifiers** (08 hrs)

Types of feedbacks in Amplifier, Derivation of expression for gain of an amplifier employing feedback (negative & positive), Effect of negative feedback on gain, gain stability, distortion, frequency response, bandwidth and input & output impedance of an amplifier.

RC coupled amplifier circuit with & without emitter bypass capacitor, Advantages and disadvantages of negative feedback in amplifier circuit.

**7. Field effect transistors (FET)** (04 hrs)

Construction, working principle and V-I characteristics of FET, difference between FET and Bipolar junction transistor (BJT), Difference between MOSFET and FET, Comparison between BJT, FET and MOSFET in terms of their features and applications.

**LIST OF PRACTICALS**

1. To identify various types of electronic components such as resistors, capacitors, inductors, diodes & transistors and to identify the terminals of diodes & transistor using multimeter.
2. To plot the V-I characteristics (forward and reverse ) of semiconductor diode
3. To plot the V-I characteristics of Zenor diode.
4. To plot input and output characteristics of transistor in CE configuration. Calculate input and output resistance and voltage gain.
5. To measure the voltage gain of two stages RC coupled amplifier.
6. To plot the frequency response of two stages RC coupled amplifier & calculate the bandwidth.
7. To study and measure the voltage gain of Push-Pull Amplifier Circuit
8. To measure the voltage gain of emitter follower circuit and plot its frequency response.

9. To measure the gain of RC Coupled Amplifier Circuit with and without emitter bypasses capacitor.
10. To plot the V-I characteristics of FET.

### LIST OF RECOMMENDED BOOKS

1. Basic Electronics and Linear Circuits by N.N. Bhargava, Tata McGraw Hills, New Delhi
2. Electronic Principles by Sahdev, Dhanpat Rai and Sons, New Delhi.
3. Electronic Devices and Circuits by Millman and Halkias, McGraw Hills, New Delhi
4. The Art of Electronics by Horowitz & Winfield Hill
5. Electronic Devices & Circuit Theory by Robert L. Boylestad, Pearson Publication
6. Operational Amplifiers and Linear Integrated Circuits by Ramakant A. Gaykwad
7. Electronics Devices and Circuits by Rama Reddy, Narosa Publishing House Pvt. Ltd., New Delhi

<b>SUGGESTED DISTRIBUTION OF MARKS</b>			
<b>Sr. No</b>	<b>Topic</b>	<b>Time Allotted</b>	<b>Marks Allocation%</b>
1	Concept of Voltage & Current Sources	03	05
2	Review of Basic Electronics	07	10
3	Transistors	16	25
4	Multistage Amplifiers	10	20
5	Large Signal Amplifiers	08	15
6	Feedback in Amplifiers	08	15
7	Field effect transistors	04	10
<b>Total</b>		<b>56</b>	<b>100</b>

### 3.4 ELECTRICAL AND ELECTRONICS ENGINEERING MATERIALS

**L T P**  
**4 - -**

#### **RATIONALE**

*A diploma holder in Electrical & Electronics Engineering will be involved in maintenance, repair and production of electrical equipment and systems. In addition, he or she may be required to procure, inspect and test electrical and electronic engineering materials. Knowledge of various types of materials will be needed in order to execute the above mentioned functions. He may also have to decide for an alternative when a particular material is either not readily available in the market or its cost is high.*

#### **DETAILED CONTENTS**

- 1. Classification of Materials** (4 Hrs)  
Classification of materials on the basis of their atomic structure and energy bands theory.
- 2. Conducting Materials** (14 Hrs)
  - 2.1 Classification of Conducting material into low-resistivity and high-resistivity materials.
  - 2.2 General/Electrical properties: Resistivity, temperature coefficient, Factors affecting resistivity (Temperature, Alloying, Hot & cold rolling, age etc.) Mechanical properties: corrosion, contact resistance, Solder ability etc. Applications of low and high resistivity materials (Copper, Aluminum, Steel, Carbon, Brass, Bronze, Tungsten, Lead, Platinum and Mercury) in the field of electrical engineering.
  - 2.3 Superconductivity, Super-conducting materials and their applications
- 3 Insulating Materials** (20 Hrs)  
Properties of insulating materials
  - 3.1 Electrical properties: Volume resistivity, surface resistance, dielectric loss, dielectric strength (breakdown voltage), dielectric constant.
  - 3.2 Physical Properties: Hygroscopicity, tensile and compressive strength, abrasive resistance, brittleness
  - 3.3 Thermal Properties: Heat resistance, classification according to permissible temperature rise. Effect of overloading on the life of an electrical appliance, increase in rating with the use of insulating materials having higher thermal

- stability, Thermal conductivity, Electro-thermal breakdown in solid dielectrics
- 3.4 Chemical Properties: Solubility, chemical resistance, weather reliability
  - 3.5 Mechanical properties: mechanical structure, tensile strength
  - 3.6 Classification of insulating materials on the basis of physical and chemical structure and their applications:
    - PVC, Bakelite, Mica, Epoxy resin, Asbestos
    - Fibrous materials (Wood, Paper, and insulating textiles), impregnated Fibrous materials (impregnated insulating paper, varnished textiles) and non- resinous materials (bitumen, waxes).
  - 3.7 Insulating Liquids: Main feature and applications of mineral insulating oils.
  - 3.8 Insulating Gases: Main feature and their applications of nitrogen, hydrogen and SF<sub>6</sub> (Sulphur Hexafluoride).
  - 3.9 Applications of insulating materials

#### **4. Magnetic Materials**

(14 Hrs)

- 4.1 Types of Magnetic materials: Diamagnetic, Paramagnetic and Ferromagnetic
- 4.2 B-H curve, Eddy and Hysteresis Losses, Curie Point and Magnetostriction
- 4.3 Soft Magnetic Materials:
  - 4.3.1 Alloyed steels with silicon: High silicon, alloy steel for transformers, low silicon alloy steel for electric rotating machines
  - 4.3.2 Cold rolled grain oriented steels for transformer, Non-oriented steels for rotating machines
  - 4.3.3 Nickel-iron alloys
  - 4.3.4 Soft Ferrites
- 4.4 Hard magnetic materials: Tungsten steel, chrome steel, hard ferrites and cobalt steel, their applications.

#### **5. Specific Purpose Materials**

(4 Hrs)

Thermocouple, bimetals, soldering and fuse materials: Their properties and applications.

## RECOMMENDED BOOKS

1. Electrical and Electronic Engineering Materials by G. K. Banerjee, PHI Publication
2. Electrical and Electronic Engineering Materials by J. B. Gupta, KATSON Publication
3. Electrical and Electronic Engineering Materials by SK Bhattacharya, Khanna Publishers, New Delhi
4. Electronic Components and Materials by Grover and Jamwal, Dhanpat Rai and Co., New Delhi
5. Electrical Engineering Materials by Sahdev, Unique International Publications
6. Electronic Components and Materials by SM Dhir, Tata Mc Graw Hill, New Delhi
7. Electrical Engineering Materials by PL Kapoor, Khanna Publishers, New Delhi
8. Electrical and Electronics Engineering Materials BR Sharma and Others, Satya Parkashan, New Delhi
9. Electrical Engineering Materials by Rakesh Dogra, SK Kataria and Sons, NEW Delhi

<b>SUGGESTED DISTRIBUTION OF MARKS</b>			
Sr.No.	Topic	Time Allotted (Hrs)	Marks Allocation (%)
1	Classification	04	10
2	Conducting Materials	14	25
3	Insulating materials	20	30
4	Magnetic Materials	14	25
5	Specific Purpose Materials	04	10
	<b>Total</b>	<b>56</b>	<b>100</b>

### 3.5 ELECTRICAL ENGINEERING DESIGN & DRAWING

L T P  
- - 6

#### RATIONALE

*A polytechnic pass-out in electrical engineering is supposed to have ability to:*

- i) Read, understand and interpret electrical engineering drawings*
- ii) Communicate and co-relate through sketches and drawings*
- iii) Prepare working drawings of panels, transmission and distribution system*

#### DETAIL CONTENTS

- 1. Symbols and Signs Conventions** (3 Sheets)  
  
Various Electrical Symbols used in Domestic and Industrial Installation and Power System as per BIS.
- 2. Wiring Diagrams :** (5 Sheets: 2 Questions per sheet)
  - 2.1 Design and Drawing of panels/Distribution board using MCBS, ELCB main switches.
  - 2.2 Single line and wiring diagram of light, fan, and Power Point for a drawing room measuring 7m x 5m. Select suitable numbers of points for this room
  - 2.3 Single line and wiring diagram of workshop measure 10m x 4m containing 2 three-phase induction motors of 2 HP & 5 HP rating and two single phase induction motors of 1 HP rating each.
  - 2.4 Simple Electric Circuits (Wiring and Single line diagram).
- 3. Projections of Electrical Accessories & Machines Parts** (5 Sheets)
  - 3.1 Bus Bar post
  - 3.2 Pin type and Shackle insulators
  - 3.3 Rotor of a Squirrel cage induction motor
  - 3.4 Pole and Coil of DC Machine.
  - 3.5 Slip rings of 3-phase Slip-ring induction Motor.
- 4. Contactor Control Circuits: Schematic and Wiring Diagram** (3 Sheets)
  - 4.1 DOL Starter of 3-phase induction Motor.
  - 4.2 Forwarding/reversing of 3-phase induction motor
  - 4.3 Limit switch control of a 3-phase induction motor
- 5. E-CAD: (4 exercises but not to be set for External Exam)**  
  
Introduction & interpreting drawings related to Electrical substation, Industries & domestic electrical circuits using E-CAD

### RECOMMENDED BOOKS

1. Electrical Engineering Drawing by S. K. Bhattacharya, New Age International Publishers
2. Electrical Engineering Drawing-I by Surjit Singh, KATSON Publications New Delhi.
3. Electrical Engineering Drawing-II by Surjit Singh, KATSON Publications New Delhi
4. Electrical Engineering Drawing by C. R. Dargan, Computech Publication, New Delhi
5. Electrical Engineering Design & Drawing by G. L. Marwaha, Eagle's Publication Jallundhar.

<b>SUGGESTED DISTRIBUTION OF MARKS</b>			
<b>S.No</b>	<b>Topic</b>	<b>Time Allotted (hrs)</b>	<b>Marks Allocation (%)</b>
1	Symbols and Signs Conventions	10	15
2	Wiring Diagrams	24	30
3	Projections of Electrical Accessories & Machines parts.	24	30
4	Contactors Control Circuits: Schematic & Wiring Diagrams	16	25
5	E-CAD	10	Nil
<b>Total</b>		<b>84</b>	100

### 3.6 ELECTRICAL WORKSHOP PRACTICE-I

L T P

- - 6

#### RATIONALE

*An electrical diploma holder will be required to inspect, test and modify the work done by skilled workers working under him. In addition, many a times, it will become necessary for him to demonstrate the correct method and procedure of doing a job. In order to carry out this function effectively in addition to conceptual understanding of the method or procedure he must possess appropriate manual skills. The subject aims at developing special skills required for repairing, fault finding, wiring in electrical appliances and installations.*

#### DETAIL CONTENTS

1. Study of electrical safety measures as mentioned in the Electricity Rules
2. Demonstration of shock treatment procedure including first aid to be given in case of electric shock
3. Wiring of following light circuits using Casing-capping (PVC) and conduit system of wiring
  - 3.1 Two lamps controlled by two switches
  - 3.2 Two lamps connected in series controlled by a single way switch
  - 3.3 Two lamps connected in parallel controlled by a single way switch
  - 3.4 One lamp controlled by two switches (staircase circuit)
  - 3.5 Two lamps controlled by three switches (double staircase circuit)
4. Wiring and testing of alarm and response circuit using relay, push buttons and bells (simple single phase circuit)
  - 4.1 Bell response circuit using one bell and one relay
  - 4.2 Bell response circuit of an office (for three rooms)
5. Wiring of a switch board containing at least two switches, one fan regulator and one 5/15A socket controlled by their respective switches using switches and matching sockets.
6. Wiring of a series test lamp board and to use it for finding out common faults
7. Testing of domestic wiring installation using Meggar
8. Internal wiring connection, fault finding and repair of a fluorescent tube light (by testing of choke, starter, tube holder, tube rod).
9. Assembly of distribution board/ panel using MCB, main switch, changeover switch and ELCB.
10. Repair and maintenance of domestic electric appliances: electric iron, geyser, fan, heat convector, Semi-automatic washing machine, room heater, electric kettle, induction heater, mixture-grinder.

*Note:* At least 4 electrical appliances as mentioned above are given to a group of 2 students for their repair and maintenance.

### **RECOMMENDED BOOKS**

1. Electrical Workshop: A Text Book by R. P. Singh, I. K. International Publishing House
2. Workshop Practices in Electrical Engineering by M. L. Gupta, Metropolitan Book Company.
3. Electrical Engineering Drawing-I by Surjit Singh, KATSON Publications New Delhi.
4. Electrical Engineering Drawing-II by Surjit Singh, KATSON Publications New Delhi
5. My Electrical Workshop by Thomson Addyman, The Wireless Press

## 4.1 ELECTRICAL MACHINES - II

L T P

4 - 2

### RATIONALE

*In this subject student will deal with various types of electrical machines which are employed in industries, power stations, domestic and commercial appliances etc. After studying this subject, an electrical diploma holder must be competent to repair and maintain these machines and give suggestions to improve their performance. Practical aspects of the subject will make the students capable of performing various tests on the machines as per latest BIS specifications. This part of the electrical machines covers basic concepts of rotating machines and DC machines.*

### DETAILED CONTENTS

#### 1. Rotating Machine: Basic Concepts (8 Hrs)

- 1.1 Principle of Energy conversion
- 1.2 Rotating Electrical Machine: definition of electrical machine, generator & motor
- 1.3 Physical concept of torque production: electromagnetic torque, reluctance torque and concept of torque angle

#### 2. DC Machines (10 Hrs)

- 2.1 Constructional features of DC Machine
- 2.2 Type of windings in DC machine: field and armature windings
- 2.3 Armature windings: lap & wave winding, armature winding terminologies (conductor, turn, coil, coil group, pole pitch, coil span, full-pitched coil, short-pitched coil, back & front-pitch)
- 2.4 Function of the Commutator in Motoring and Generating action
- 2.5 Armature Reaction in DC machine
- 2.6 Commutation, cause of sparking, method to improve commutation
- 2.7 Power flow diagram of DC Machines

#### 3. DC Generator (16 Hrs)

- 3.1 Working principle of DC generator
- 3.2 Induced EMF equation & factors determining the EMF of generator
- 3.3 Electromagnetic torque equation & factors determining the torque
- 3.4 Relationship between generated EMF and generator terminal voltage

- 3.5 Types of DC generator: separately excited, shunt wound, series wound and compound (differential or cumulative type) generator
- 3.6 Necessary conditions to build up induced EMF in a DC shunt generator.
- 3.7 Operating characteristics of separately excited, Shunt, Series and Compound DC generator
- 3.8 Losses in DC Generator, Efficiency of DC Generator

#### **4. DC Motor**

**(18 hrs)**

- 4.1 Working principle of DC motor
- 4.2 Back EMF equation and its significance
- 4.3 Torque equation of DC motor
- 4.4 Equivalent Circuit diagram
- 4.5 Relationship between back EMF and terminal voltage
- 4.6 Types of DC motors: Series motor, Shunt motor and Compound motor (differential and cumulative)
- 4.7 Need of Starter, 3-point Starter, 4-point Starter
- 4.8 Speed control of DC series and shunt motors: Armature & Field control methods and Ward Leonard method.
- 4.9 Operating characteristics of DC motors: Shunt, Series and Compound motors.
- 4.10 Effect of armature resistance on Torque-speed curve,
- 4.11 Losses in DC motor, Efficiency of DC motor: Direct method (direct mechanical loading method), Indirect method (Swinburne's method) and regenerative method (Hopkison's method)

#### **5. Applications and Maintenance of DC Machine**

**(4 Hrs)**

- 5.1 DC generator applications
- 5.2 DC motor applications
- 5.3 DC Machines (motor & generator) testing and maintenance

#### **LIST OF EXPERIMENTS**

1. Starting of DC motor with help of three point and four point starter
2. To plot the open circuit characteristics (OCC) of separately excited DC generator
3. Measurement of induced EMF of a DC Shunt generator as a function of field current
4. Measurement of terminal voltage of a DC shunt generator as a function of load current.
5. To start DC series motor with two-point starter and to observe the speed.
6. Speed control of DC shunt motor using Armature control method
7. Speed control of DC shunt motor using Field control method.
8. Measurement of the speed of a DC shunt motor as a function of load torque
9. Determination of efficiency of DC motor by Swinburne's Test.

## RECOMMENDED BOOKS

1. Electrical Machines by SK Bhattacharya, Tata McGraw Hill, New Delhi
2. Electrical Machines by SK Sahdev, Unique International Publications, Jalandhar
3. Electrical Machines by Nagrath and Kothari, Tata McGraw Hill, New Delhi
4. Electrical Machines by JB Gupta, SK Kataria and Sons, New Delhi
5. Electrical Machines by Dr. P. S Bhimbra, Khanna Publications, Delhi

<b>SUGGESTED DISTRIBUTION OF MARKS</b>			
<b>Sr. No.</b>	<b>Topic</b>	<b>Time Allotted</b>	<b>Marks Allocation (%)</b>
1	Rotating Machine: An Overview	08	15
2	Basic Concepts of DC Machine	10	20
3	DC Generator	16	25
4	DC Motor	18	30
5	Applications & Maintenance of DC Machine	04	10
<b>Total</b>		<b>56</b>	<b>100</b>

## 4.2 ELECTRICAL & ELECTRONIC MEASURING INSTRUMENTS

L T P

4 - 2

### RATIONALE

*Diploma holders in Electrical Engineering have to work on various jobs in the field as well as in testing laboratories and on control panels, where he performs the duties of installation, operation, maintenance and testing by measuring instruments. Persons working on control panels in power plants, substations and in industries will come across the use of various types of instruments and have to take measurements. Instruments used to read and observe the general electrical quantities like current, voltage, power, energy, frequency, resistance etc and their wave shapes, have been incorporated in this subject. So the technician will know the construction and use of various types of electrical instruments.*

### DETAILED CONTENTS

1. **Introduction to Electrical Measuring Instruments** (04 hrs)
  - 1.1 Concept of Measurement and Instruments.
  - 1.2 Block diagram of generalized measurement Systems,
  - 1.3 Measurement Terms: Accuracy, precision, linearity sensitivity, reproducibility, dead band, Range.
  - 1.4 Types of electrical measuring instruments - indicating, integrating and recording type instruments.
  - 1.5 Essentials of indicating instruments - deflecting, controlling and damping torque, methods of achieving deflecting & controlling torques in analog instruments.
  
2. **Ammeters and Voltmeters (Moving coil and moving iron type)** (08 hrs)
  - 2.1 Concept of Galvanometer, Ammeter, Voltmeter and difference between them, Extension of the range of ammeter & voltmeter, Numerical related to extension of range of meters.
  - 2.2 Construction and working principles of moving Iron and moving coil instruments.
  - 2.3 Merits and demerits, sources of error and application of these instruments.
  
3. **Wattmeter (Dynamometer Type)** (05 hrs)

Construction, working principle, merits and demerits of dynamometer type wattmeter, sources of error.

4. **Energy Meter (Induction type)** (05 hrs)
- 4.1 Construction, working principle, merits and demerits of single-phase and three-phase energy meters, numerical problems.
  - 4.2 Errors and their compensation.
  - 4.3 Construction and working principle of maximum demand indicator.
5. **Measurement of Resistance, Inductance & Capacitance using Bridges** (06 Hrs)
- Principal of Working of Wheatstone Bridge, limitations of Wheatstone bridge, Measurement of medium resistance by ammeter, voltmeter method, Kelvin's double bridge for measurement of low resistance,
- A.C. bridges: Maxwell Bridge for Inductance measurement, Wien Bridge for Capacitance measurement.
6. **Miscellaneous Measuring Instruments** (10 hrs)
- Construction, working principle and applications of
- 6.1 Meggar (Insulation Resistance tester)
  - 6.2 Earth tester
  - 6.3 Frequency meter (dynamometer type)
  - 6.4 Single phase power factor meter (Electrodynamometer type).
  - 6.5 Synchroscope
  - 6.6 Clamp-on meter.
  - 6.7 LCR meter
7. **Electronic Instruments** (08 hrs)
- 7.1 Cathode Ray Oscilloscope: Block diagram, working principle of CRO and its various controls. Applications of CRO.
  - 7.2 Digital multi-meter (only block diagram) and Applications.
  - 7.3 Introduction and block diagram of Digital single phase and three phase Energy meters.
  - 7.4 Introduction to Intelligent Energy Meter, Load manager.
8. **Transducers & Their Application in Measurement of Non-electrical Quantities** (16 hrs)
- 8.1 Introduction and classification of transducers
  - 8.2 Use of Potentiometers in displacement measurement
  - 8.3 Working principle and applications of LVDT.
  - 8.4 Pressure sensing devices, measurement of pressure using
    - LVDT and Bourdon tube arrangement
    - Manometer
  - 8.5 Working principle Strain gauge and its applications in measurements,

temperature compensation using Strain gauge bridges.

#### 8.6 Measurement of temperature using

- Thermometers
- Thermocouple
- Resistance temperature detector
- Thermistor
- Optical Pyrometer.

#### 8.7 Electromagnetic flow meter for flow measurement

#### 8.8 Liquid level measurement using

- Floats
- Resistive and Capacitive probes

#### 7.7 Introduction to Smart Sensors.

### **LIST OF PRACTICAL**

1. Use of analog and digital multi-meter for measurement of voltage, current (AC/DC) and resistance
2. Use of LCR meter for measuring inductance, capacitance and resistance.
3. To calibrate 1-phase energy meter by direct loading method.
4. To measure the value of resistance using Wheatstone bridge
5. To measure power, power factor in a single-phase circuit, using wattmeter and power factor meter and to verify results with calculations.
6. Measurement of voltage and frequency of a sinusoidal signal using CRO and draw wave shape of signal.
7. To measure Energy at different Loads using Single phase Digital Energy meter.
8. To study a Linear Variable Differential Transformer (LVDT) and use it in a simple experimental set up to measure a small displacement.
9. To measure the speed of a motor shaft with the help of non-contact type pick-ups (magnetic or photoelectric) or Digital Tachometer.

### **RECOMMENDED BOOKS**

1. Electrical Measurements and Measuring Instruments by Golding and Widdis; Wheeler Publishing House, New Delhi
2. Industrial Instrumentation by Dr. Umesh Rathore, KATSON Publication, New Delhi
3. A Course in Electrical Measurement and Measuring Instruments by AK Sawhney and PL Bhatia; Dhanpat Rai and Sons, New Delhi
4. Electronic Instrumentation and Measurement Technique, by W. D. Cooper & A. D. Helfrick, Pearson INDIA
5. Experiments in Basic Electrical Engineering by SK Bhattacharya and KM Rastogi, New Age International (P) Ltd., Publishers, New Delhi
6. Electronics Instrumentation by Umesh Sinha, Satya Publication, New Delhi
7. Electrical Measurements and Measuring Instruments by SK Sahdev, Unique International Publications, Jalandhar
8. Electrical Measurement and Measuring Instruments by JB Gupta, SK Kataria and Sons, New Delhi
9. Electrical Measurement and Measuring Instruments by ML Anand, SK Kataria and Sons, New Delhi

**SUGGESTIVE DISTRIBUTION OF MARKS**

<b>Sr. No.</b>	<b>Topic</b>	<b>Time Allotted</b>	<b>Marks Allocation (%)</b>
1	Introduction to Electrical Measuring Instruments	04	10
2	Ammeters and Voltmeters (Moving coil and moving iron type)	06	15
3	Wattmeter	04	10
4	Energy meter	04	10
5	Measurement of Resistance, Inductance & Capacitance using Bridges	06	10
6	Miscellaneous Measuring Instruments	08	15
7	Electronic Instruments	08	10

<b>Total</b>		<b>56</b>	<b>100</b>

## 4.3 ELECTRICAL POWER SYSTEM-I

L T P

4 - 0

### RATIONALE

*In view of the complexities associated with the modern interconnected power stations, the responsibilities and the job requirements of a diploma pass out have become more complex than what they used to be earlier. He is required to work with modern electrical equipment and maintain reliability of supply. The course is designed to understand the concepts and principles involved in the construction and working of various types of electrical power generating stations, economics of power generation and tariffs system. The teaching of this subject requires reinforcement in the form of visits to power stations.*

### DETAILED CONTENTS

- 1. Sources of Electrical Power Generation** (04 hrs)
  - 1.1 Conventional sources of electrical power generation such as coal, hydro, nuclear, natural gases and their contribution in power generation in present energy scenario
  - 1.2 Non-conventional sources of electrical power generation such solar, wind, mini hydro, geothermal, tidal: Their relevance and contribution in power generation in present energy scenario
  
- 2. Hydroelectric Power Plant** (12 hrs)
  - 2.1 Introduction: Hydrology, Calculation of power generated in hydro power plant.
  - 2.2 Hydro power plant layout, function of each component.
  - 2.3 Selection of site for hydro power plant.
  - 2.4 Classification of hydro power on the basis of water discharge & head available.
  - 2.5 Water Turbine: Various types of water turbines and their comparison on the basis of head, discharge, speed and direction of water flow
  - 2.6 Merits and demerits of hydro power plant.
  
- 3. Steam Power Plant** (12 hrs)
  - 3.1 Site selection for steam power plant
  - 3.2 Layouts of various sections in steam power plant
  - 3.3 Function of heat exchanger, economizer & cooling tower in steam power plant
  - 3.4 Efficiency of steam power plant
  - 3.5 Merits and demerits of steam power plant
  
- 4. Nuclear Power Plant** (06 hrs)
  - 4.1 Introduction: Nuclear reaction, nuclear fission & fusion.
  - 4.2 Site selection for nuclear power plant

- 4.3 Layout of nuclear power plant & function of each component
- 4.4 Nuclear reactor control
- 4.5 Safety issues and their remedial measures in nuclear power plant
- 4.6 Merits and demerits of Nuclear Power Plants
- 4.7 Nuclear Waste Disposal

**5. Diesel Power Plant** (04 hrs)

- 5.1 Elements of Diesel Power Plant & function of each components
- 5.2 Merits and demerits of diesel power plant
- 5.3 Performance and efficiency of diesel power plant
- 5.4 Applications of diesel power plant

**6. Economics of Power Generation** (12 hrs)

- 6.1 Fixed and running cost, load estimation, load curves, connected load, maximum demand, demand factor, diversity factor, Chronological load curve, load duration curve, Energy load curve, load factor, Capacity factor, utilization factor, numerical problems.
- 6.2 Classification of Power Plants: Base load, peak load and standby power stations, stand by capacity in power plants, selection of number and size of units for different types of power stations.
- 6.3 Inter-connection of power stations and its advantages, concept of regional and national grid.

**7. Tariffs** (06 hrs)

- 7.1 Concept of Tariffs
- 7.2 Types of Tariff system, Numerical problems related to electricity tariff

**RECOMMENDED BOOKS**

- 1. A Course in Electrical Power by A. Chakarborty, M.L. Soni, P.V. Gupta and U.S. Bhatnagar, Dhanpat Rai & Sons, New Delhi
- 2. Principles of Power Systems by VK Mehta, S Chand and Co., New Delhi
- 3. Power System(Analysis & Design) by Dr. B. R. Gupta, S Chand and Co., New Delhi
- 4. Electrical Power – II by SK Sahdev, Unique International Publications, Jalandhar (Pb)
- 5. Energy Management by Dr. Sanjeev Singh & Dr. Umesh Rathore, KATSON Publications New Delhi
- 6. Electrical Power Systems by B. M. Weedy, Wiley Publishing

**SUGGESTED DISTRIBUTION OF MARKS**

<b>Sr. No.</b>	<b>Topic</b>	<b>Time Allotted (Hrs)</b>	<b>Marks Allocation (%)</b>
1	Sources of Power Generation	04	10
2	Hydroelectric power plant	12	20
3	Steam power plant	12	20
4	Nuclear power plant	06	10
5	Diesel Power plant	04	10
6	Economic generation	12	20
7	Tariffs	06	10
<b>Total</b>		<b>56</b>	<b>100</b>

## 4.4 ELECTRONIC DEVICES & CIRCUITS-II

L T P

4 - 2

### **RATIONALE**

*Having attained basic knowledge of diodes, transistors and amplifier circuits, this course will enable the students to learn about the use of transistors as an oscillator, electronic switch and its application on wave shaping circuits etc. It also gives information about Optoelectronic devices, OPAMP and their applications in the field of electronic service industry and regulated power supplies.*

#### **1 Sinusoidal Oscillators (10 hrs)**

Working Principle of Oscillator, Use of positive feedback in amplifier circuit; Barkhausen criterion for oscillations, Difference between Oscillator & Electrical Generator.

Different Types of Oscillator circuits: Tuned collector, Hartley, Colpitts, Phase shift, Wien Bridge, and Crystal oscillator-Their working principle, frequency range and applications

#### **2 Tuned Voltage Amplifier (6 hrs)**

Series and Parallel Resonant Circuits, Comparison between Series and Parallel resonant Circuits, Single & Double Tuned Voltage Amplifier Circuits and their frequency response

#### **3 Wave Shaping Circuits (08 hrs)**

- Integrating and differentiating circuits (RC and RL): Their working and applications
- Diode Clipping circuits, biased Clipping circuits
- Clamping circuits

#### **4. Multi vibrator Circuits (08 hrs)**

- Working principle of Transistor as Switch
- Concept of Multi-vibrator: A stable, Monostable, and Bi stable
- Block diagram of IC555 and its working and applications
- Working of IC555 as a stable and monostable multivibrator
- Applications of Multivibrator Circuits

#### **5. Operational Amplifiers (10 hrs)**

- Characteristics of an ideal operational amplifier and its block diagram, Pin Identification of IC741
- Definitions: Differential voltage gain, CMRR, slew rate, input offset current, input offset voltage, total output offset voltage.

- Open loop configurations: Differential, Inverting & Non Inverting modes, limitations of open loop configuration.
- Closed loop configuration: As an Inverting & Non-inverting amplifier, Schmitt trigger circuit, Comparator, Differentiator and Integrator

## **6. Optoelectronic Devices**

(6 hrs)

Working principle of Photo-resistor, photo diode, photo transistor and their applications, Need for Opto-isolation in electronic circuit, Working of optocoupler circuit.

## **7. Regulated Power Supplies**

(8 hrs)

- Working of DC regulated power Supply
- Line and load side regulation
- Regulator ICs (78XX, 79XX)
- Switching Mode Power Supply (SMPS)-Working Principle, advantages & applications.

## **LIST OF PRACTICAL**

1. To measure the frequency of the generated signal in Harley or Colpitt oscillator circuit and observe the output using oscilloscope.
2. To measure the frequency of the generated signal in Crystal oscillator circuit and observe the output using oscilloscope
3. To observe the response of RC Differentiator Circuit with square wave at the input. Observe the wave at output.
4. To observe the response of RC Integrator Circuit with square wave at the input. Observe the wave at output.
5. Observe the output at Clipper Circuit using diode clipper circuit with AC Signal at the input of clipper circuit. Observe the input /output waveform using Oscilloscope.
6. Observe the output at Clamper Circuit using diode clamper circuit with AC Signal at the input of circuit. Observe the input /output waveform using Oscilloscope at different biasing voltages in the clamper circuit.
7. Use of IC 555 as monostable multivibrator and observe the output for different conditions
8. Use of IC 555 as a stable multivibrator and observe the output at different conditions
9. Design & build inverting and Non-inverting amplifier of desired voltage gain using OPAMP
10. Study and build a power supply using IC 7805/7905/7812

## RECOMMENDED BOOKS

1. Basic Electronics and Linear Circuits by N.N. Bhargava, Tata McGraw Hills, New Delhi
2. Electronic Principles by Sahdev, Dhanpat Rai and Sons, New Delhi.
3. Electronics Principles by Malvino, Tata McGraw Hills, New Delhi
4. Electronic Devices and Circuits by Millman and Halkias, McGraw Hills, New Delhi
5. Electronics by Grob, Tata McGraw Hills, New Delhi
6. The Art of Electronics by Horowitz & Winfield Hill
7. Electronic Devices & Circuit Theory by Robert L. Boylestad, Pearson Publication
8. Operational Amplifiers and Linear Integrated Circuits by Ramakant A. Gaykwad
9. Electronics Devices and Circuits by Rama Reddy, Narosa Publishing House Pvt. Ltd., New Delhi

<b>SUGGESTED DISTRIBUTION OF MARKS</b>			
<b>Sr. No</b>	<b>Topic</b>	<b>Time Allotted</b>	<b>Marks Allocation%</b>
1	Sinusoidal Oscillators	10	15
2	Tuned Voltage Amplifier	06	15
3	Waveshapping Circuits	08	15
4	Mutivibrator Circuits	08	15
5	Operational Amplifiers	10	20
6	Optoelectronic Devices	06	10
7	Regulated Power Supplies	08	10
	<b>Total</b>	<b>56</b>	<b>100</b>

## 4.5 DIGITAL ELECTRONICS

L T P

4 - 2

### RATIONALE

*To familiarize students with Boolean algebra, concepts of logic circuits, realization of various logic circuits using different logic gates. After this course the student will be able to design simple logic circuits, understand flip-flops, counters, registers and A/D & D/A converter circuits and their applications in electronic based control and switching circuits.*

### Pre-Requisite -

1. Basic Electronics Engineering

### DETAIL CONTENTS

#### 1. Introduction

4 hrs

Analog Signal, Digital Signal, Difference between Analog & Digital Signal, Applications & Advantages of Digital Signal

#### 2. Number System

8 hrs

- Binary, Octal, & Hexadecimal number systems, Conversion from Decimal, Octal & Hexadecimal Systems to Binary System & Vice Versa.
- Binary Addition, Subtraction, Multiplication, Division, 1's and 2's compliment methods of subtraction.
- Concept of code: 8421, BCD, Excess 3 and Gray Code
- Concept of Parity

#### 3. Logic Gates & Families

10 hrs

- Logic symbol, logical expression and truth table of AND, OR, NOT, NAND, NOR, EX-OR gates,
- Universal property of NAND and NOR gate.
- Logic Simplification Circuits-Basic laws of Boolean algebra, Duality theorem, De Morgan's Theorems.
- Boolean expressions using Sum of Products (SOP) and Product of Sums (POS) forms.
- K-map representation of logical functions.
- Minimization of logical expressions using K-map ( 2, 3, 4 variables).
- Logic Gates & Families (SSI, MSI, LSI, VLSI, ULSI)

#### 4. Arithmetic Circuits

6 hrs

- Half Adder/Full Adder Circuit, their design and implementation
- Half Subtractor /Full Subtractor Circuit, their design and implementation

## 5. Decoder, Encoder, Multiplexer & De-Multiplexer

8 hrs

- Basic binary decoder, Encoder-Decimal to BCD Encoder
- Block diagram, Truth table, Logical expression and logic diagram of Multiplexers (4:1 and 8:1).
- Block diagram and Truth table of Demultiplexer (1:4 and 1:8)

## 6. Flip Flops, Counters, Shift-Registers

14 hrs

- One-bit memory cell, clock signal, Latch-SR Latch, Difference between Latch & Flip-Flop
- Flip Flops:** S-R Flip flop, D- Flip Flop, J-K Flip Flop, Master Slave Flip-Flop, T- Flip Flop
- Counters:** Asynchronous Counters I Ripple Counter (2 bit, 3-bit, Decade)  
: Synchronous Counters (2-bit, 3-bit, decade synchronous counter), Ring Counter
- Shift Registers:** Concept of Shift registers, Types of Shift registers (SISO, SIPO, PISO, PIPO and Universal Shift Registers)
- Applications of Flip-Flops, Counters & Shift Registers

## 7. Memories

02 hrs

Classification of Memories RAM, ROM, PROM, EPROM, E2PROM, Cache Memory, Static and Dynamic RAM

## 8. D/A & A/D Converters

04 hrs

- Digital to Analog Converters (Weighted register, R-2R Ladder D/A Converter)
- Analog to Digital Converter (Dual Slope method, Successive Approximation A/D Converter)
- Applications of A/D & D/A Converter

## LIST OF PRACTICAL

- 1) Verification of truth table of various logic gates (NOT, OR, AND, NAND, NOR, EXOR) using logic circuit ICs and breadboard.
- 2) To verify Universal property of NAND and NOR gates.
- 3) Verification of De-Morgan's theorem.
- 4) To design and implement Half adder Circuit.
- 5) To design and implement Full adder Circuit.
- 6) Implementation of Multiplexer/Demultiplexer using Logic gates.
- 7) Construction of 7-segment decoder driver circuit.
- 8) Verification of State Table for RS, JK, D & T Flip-Flops.
- 9) Design and verify 2 or 3-bit Synchronous counter.
- 10) Design and verify 2 or 3-bit Asynchronous counter.

## RECOMMENDED BOOKS

1. Digital Principles and Applications by Leach & Malvino, Tata McGraw Hill Publication
2. Modern Digital Electronics by R. P. Jain, Tata McGraw Hill Publications
3. Fundamentals of Digital Circuits by A. Anand Kumar, PHI Publications
4. Digital Electronics by Vipin Arora, Eagle's Publication Jullundhar
5. Digital Electronics by Pratima Manhas & Shaveta Thakral, KATSON Publication, New Delhi

<b>SUGGESTED DISTRIBUTION OF MARKS</b>		
<b>Chapter No</b>	<b>Time Allotted</b>	<b>Marks Allotted %age</b>
1	04	05
2	08	15
3	10	15
4	06	10
5	08	15
6	14	25
7	02	05
8	04	10
<b>Total</b>	<b>56</b>	<b>100</b>

## 4.6 COMPUTER PROGRAMMING AND APPLICATIONS

L T P

- - 3

### RATIONALE

*Computer plays a very vital role in present day life, more so, in the professional life of Diploma engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposure to various engineering applications of computers. The knowledge of C language will be reinforced by the practical exercises and demonstration of application software in the field of Electrical Engineering during the course of study. Introduction to data base management system is also a very significant field with vast employment potential.*

### DETAILED CONTENTS

1. **Algorithm and Program Development** (3 hrs)
  - a) Steps in development of a program
  - b) Flow-charts, algorithm development
  - c) Introduction to various computer languages
  - d) Concept of interpreter, compiler, high level language(HLL), machine language (ML) and Assembly Language
  
2. **Program Structure (C Programming)** (6 hrs)
  - a) History of 'C', data types, input output statements, arithmetic and logical operations, data assignments, precedence and associativity
  - b) I/O statements: Assignment, Variables, arithmetic operation- their precedence, data types standard I/O function, formulated I/O
  - c) Control Statements: Logical and relational operators; if-else, while, do- while, for loops, breaks, switch statements
  - d) Functions: Function declaration, parameter passing- by value, storage classes (Local, Global and Static variables, standard library functions
  - e) Arrays: Single and multi-dimensional arrays, character arrays
  - f) Pointers: To various data types, pointers in parameters passing, pointers to function
  - g) Structures: Definition of a structure, pointer to structure, union and array of

structure

- h) Strings: String processing, functions and standard library function
- i) Data files: File handling and manipulation, file reading and writing.

### 3. **Software Applications in Electrical & Electronics Engineering** (5 hrs)

Overview of Computer applications through various applications software related to Electrical Engineering branch viz: MATLAB, E-CAD, and Circuit Maker.

#### **LIST OF PRACTICALS**

1. Programming exercise on executing and editing a C Programs.
2. Programming exercise on defining variables and assigning values to variables
3. Programming exercise on arithmetic and relational operators
4. Programming exercise on reading & writing a character
5. Programming exercise on formatting output using printf
6. Programming exercise on formatting input using scanf
7. Programming exercise on simple IF statement
8. Programming exercise on IF... ELSE statement
9. Programming exercise on SWITCH statement
10. Programming exercise on GOTO statement
11. Programming exercise on DO-WHILE statement
12. Programming exercise on FOR statement
13. Basic commands in MATLAB with simple exercises
14. E-CAD exercise

#### **RECOMMENDED BOOKS**

1. Programming in C by Schaum Series McGraw Hill
2. Programming in C by Kerning Lan and Richie; Prentice Hall of India, New Delhi
3. Programming in C by Balaguru Swamy, Tata McGraw Hill, New Delhi.
4. Let us C-Yashwant Kanetkar, BPB Publications, New Delhi
5. Vijay Mukhi Series for C and C++

6. Programming in C by BP Mahapatra, Khanna Publishers, New Delhi
7. Elements of C by MH Lewin, Khanna Publishers, New Delhi
8. Pointers in C by Yashwant Kanetkar, BPB Publishers New Delhi
9. Getting Started with MATLAB: A Quick Introduction for Scientists & Engineers by Rudra Pratap Singh, Oxford Publication
10. The essentials of Computer Organizing and Architecture by Linda Null and Julia Labur, Narosa Publishing House Pvt. Ltd., New Delhi

<b>SUGGESTED DISTRIBUTION OF MARKS</b>			
Topic No.	Topic	Time Allotted( Hrs)	Marks Allocation
1.	Algorithm and Program	03	20
2.	Program Structure (C)	06	60
3.	Software Applications	05	20
<b>Total</b>		<b>14</b>	<b>100</b>

## 4.7 ELECTRICAL WORKSHOP PRACTICE-II

L - T - P  
- - 6

### RATIONALE

*An electrical diploma holder will be required to inspect, test and modify the work done by skilled workers or artisans working under him. In addition to these persons, many a times, it will become necessary for him to demonstrate the correct method and procedure of doing a job. In order to carry out this function effectively in addition to conceptual understanding of the method or procedure he must possess appropriate manual skills. The subject aims at developing special skills required for repairing, faultfinding, wiring in electrical appliances and installations.*

### DETAIL CONTENTS

1. Field study of pipe plate chemical earthing for a small house and 3-phase induction motor.
2. Testing the condition of earthing using earth tester in an electrical installation.
3. Connections of Single phase and 3-phase motors through appropriate starters and to change their direction of rotation of motor.
4. Study and testing of armature, commutator (with growler) and field pole winding of Mixer Motor, Drill Machine.
5. Wiring, testing and fault finding of the following contactor control circuits operating on 3-phase supply:
  - a) Remote control circuits
  - b) Automatic star-delta starter using TDR
  - c) Inter locking circuits (Forward/Reversed)
  - d) Sequential operation control circuits

Also make the line diagram of control circuit of each exercise and interpret the function of each component in ladder diagram

6. Winding/re-winding of a fan (ceiling and table)
7. Power cable jointing using epoxy based joint kits
8. Procedure of laying of underground cables.
9. Testing of an Inverter at its rated load and verification of its backup Hours according to specification, batteries Ampere-hour and grouping to increase backup Hrs.

**Note: Students can be taken to field visit to any construction site where earthing work and underground cables laying work is in progress.**

## **RECOMMENDED BOOKS**

1. Electrical Workshop: A Text Book by R. P. Singh, I. K. International Publishing House
2. Workshop Practices in Electrical Engineering by M. L. Gupta, Metropolitan Book Company.
3. Electrical Engineering Drawing-I by Surjit Singh, KATSON Publications New Delhi.
4. Electrical Engineering Drawing-II by Surjit Singh, KATSON Publications New Delhi
5. My Electrical Workshop by Thomson Addyman, The Wireless Press
